

SHOPEZ PLATFORM SUITE

BRAINSTORMING & IDEATION PHASE

Brainstorming, Idea Generation & Prioritization

Feature Mapping, Evaluation Metrics & Core Innovations

PROJECT NAME: ShopEZ Premium E-Commerce Platform

PREPARED BY: P Pranay

DATE: June 2026

VERSION / STATUS: v1.0.0 / Final Approved

1. Core Idea Log & Concept Generation

The primary objective during initial ideation sessions was identifying the critical shortcomings of typical vanilla e-commerce websites and developing robust, premium features for ShopEZ:

- Simulated Wallet System: Provides an immediate sandbox credit wallet loaded with Rs. 500 per customer to facilitate seamless transaction testing and mock purchases.
- Administrative Activity Control: Empowers administrators to lock and block suspicious users in real time. Features a custom endpoint validation blocking active user API tokens.
- JSON Database Fallback: Prevents app-level failure when connection to local MongoDB is severed. Dynamically falls back to read-only operation parsing local mock database configurations.
- Indian Rupee Localization: Complete translation of pricing structures from standard USD formats to localized INR calculations, matching realistic Indian merchant profiles.

2. Feature Prioritization Matrix

Features were evaluated on business value (Customer wow factor) versus execution complexity (development duration):

Feature Name	Target User Benefit	Complexity (1-5)	Priority Score
INR Pricing Localization	Seamless conversion values & currency tags	2	High (P0)
Wallet Transaction Log	Mock wallet billing operations	3	High (P0)
Admin User Blocking	Real-time database authorization restriction	3	Medium (P1)
JSON Database Fallback	High Availability database failover protection	4	Medium (P1)
Category Megamenu Circle	Premium, visually stunning navigation	2	High (P0)
