BRAINSTORMING & IDEATION PHASE

Define Problem Statements Template

Customer Pain Points, System Friction & Core Architecture Problems

PROJECT NAME: ShopEZ Premium E-Commerce Platform

PREPARED BY: P Pranay

DATE: June 2026

VERSION / STATUS: v1.0.0 / Final Approved

1. Core Problem Definitions

Standard e-commerce deployments suffer from systemic issues in usability, localized payment setups, and high-availability failure modes. Below are the key problems defined for ShopEZ:

Problem 1: Foreign Currency Confusion (Usability)

Most development templates default to US Dollar pricing (\$). For domestic Indian shoppers, displaying prices in USD leads to cognitive load, currency conversion concerns, and cart abandonment.

Problem 2: Fatal Database Disconnection Failures (High Availability)

If a local MongoDB database drops offline due to network limits or memory bottlenecks, typical MERN apps crash. Users are met with catastrophic loading spinner hangs or raw network stack errors.

Problem 3: Simple, Flat User Interface Layout (Engagement)

Basic grids without promotional banners, deals, animations, or sliding carousels look unpolished, leading to low visitor retention and poor user engagement.
