PROJECT DEVELOPEMENT

User Acceptance Testing (UAT) Specifications

Testing Scenarios, Execution Metrics & Assert Results log

PROJECT NAME: ShopEZ Premium E-Commerce Platform

PREPARED BY: P Pranay

DATE: June 2026

VERSION / STATUS: v1.0.0 / Final Approved

1. UAT Execution Scope

User Acceptance Testing asserts that the application behaves exactly as expected during critical user operations. Testing scenarios map out all client-to-backend transactional features:

Test Scenario 1: Authentication & Block Checking

Assert that a blocked user is immediately logged out of their session. Verify that subsequent API requests are rejected with a 403 Forbidden validation status code.

Test Scenario 2: Checkout Wallet & Coupon Calculation

Assert that applying coupon FESTIVAL20 validates correctly against cart subtotal value. Verify that selecting Wallet payment decreases user balance and immediately updates product inventories.

2. UAT TestCase Matrix Log

Test Case ID	Scenario Detail	Expected Result	Pass/Fail
UAT-TC-1	Input search query "laptop"	Autocomplete suggestions dropdown opens	PASS
UAT-TC-2	Apply Welcome10 Coupon	Cart subtotal displays 10% deduction values	PASS
UAT-TC-3	Order payment with wallet	Wallet decreases, order status: Processing	PASS
UAT-TC-4	Admin blocks customer token	Customer session revoked, api: 403 status	PASS
UAT-TC-5	Sever DB local connection	Fallback reads products from json dataset	PASS
